

Instructor Performance and Course Quality Evaluation on EduPro

Research Paper / Project Report

Abstract: This project evaluates instructor performance and course quality using EduPro platform data. The analysis focuses on instructor ratings, experience, expertise, course ratings, and enrollment behavior.

Introduction: Instructor quality and course design significantly influence learner satisfaction and platform credibility in online education.

Problem Statement: Determine which instructors consistently deliver high-quality courses and analyze the relationship between experience, ratings, and enrollments.

Dataset: Users, Teachers, Courses, and Transactions sheets were used for analysis.

Methodology: Data cleaning, integration, exploratory analysis, KPI generation, instructor evaluation, and course quality assessment.

KPIs: Average Teacher Rating, Average Course Rating, Rating Consistency Index, Experience Impact Score, and Enrollment Influence Ratio.

Conclusion: The project provides a data-driven framework for evaluating instructional effectiveness and improving educational outcomes on EduPro.
